----------	-------------	------------	-----------

Camera 4828 YVR\_INT\_L7EX1 International Lane 7 Exit 1 (10.106.21.75), P3265LVE down, POE/port reset done, still nogo, camera is connected to switch SWYVR12 port 2/1 at location: CER 2C1 - C2405.0 - ITB, MAC: B8A44F8BF761 , CGIR 182775

AG 04/25/25 - located the CER room it's inside the immigration office. The camera isn't plugged into the correct port on the managed switch. My spot monitor is able to ping an IP in the cameras IP range but isn't receiving POE. I'm able to ping an IP in the cameras range even when no patch cable connected to the specified port. I will need to re-attend as I am the only one with IT room access. A second tech will be needed for testing purposes. I will also need Matthew's assistance and the support of the team that manages the switches.

05/15/25 - AG and JK - We located the cable in CER4C it was plugged into Switch number 10 stack 1 port 35. We tested the cable and it resulted in multiple shorts. We replaced the end in the field and it still came up with shorts. Due to the long weekend we are unable to continue testing as TSA needs to open all lines. Considering we came up with the same results after replacing the end it's likely the cable has been damaged and will need to be replaced.

06/23 - camera arrived in Ottawa.

07/17/25 - Matthieu from CATSA HQ confirmed that wiring has been resolved by Paladin on site so this WO can be closed.

Customer Reference#: 182775

Technicians: Alexis Gunther, Jordan Kenning
